Electric Vehicle (EV) Charging Guide & Supercharger Billing

Tesla Supercharger Network Access

- All Apex Tesla vehicles (Model 3 & Model Y) have automated plug-and-charge functionality at all Tesla Supercharger stations.
- Simply plug the cable into the charge port. Charging commences immediately without requiring a Tesla mobile app.
- **Wholesale Pass-Through Billing:** Supercharger kilowatt-hour (kWh) costs are billed directly to your Apex rental invoice with **zero markup or administration fees**.

Non-Tesla Fast Charging (CCS & J1772)

- Vehicles include a standard J1772 Level 2 adapter located in the glove compartment or front trunk.
- Use Electrify America, EVgo, or ChargePoint networks using credit card tap-to-pay at the charger.
