Dead Battery Jump-Starts & 12V Electrical Systems

Causes of Discharged Batteries

Leaving dome lights, headlights, or 12V cooler accessories running while the engine is shut off will deplete the starting battery within 3 to 6 hours.

How to Request a Jump-Start

1. Call 24/7 Roadside Assistance at 1-800-555-APEX.
2. A mobile service vehicle with a booster pack will be routed to your coordinates.
3. **EV Note:** On electric vehicles (Tesla), never attempt to jump-start another vehicle using the Tesla 12V low-voltage battery posts, as this will damage the high-voltage DC-DC inverter and void warranties.
