Emergency Fuel Delivery and Depleted EV Battery Recovery

Document ID: **DOC-062** | File Reference: emergency_07_emergency_fuel_and_battery_towing.md | Verification: Active Corporate Policy

Running Out of Fuel or EV Charge on the Highway

Running Out of Gasoline

- Apex Roadside Assistance dispatches an emergency service vehicle to deliver **3 gallons of fuel** directly to your location.
- **Cost:** Free delivery under Gold Platinum Protection. For standard customers, a flat service dispatch fee of \$45.00 plus retail fuel price applies.

Depleted EV Battery on the Road (0% Charge)

- Electric vehicles cannot be filled with a fuel can. If an EV battery drops to 0% and shuts down, it must be loaded onto a flatbed tow truck (EVs cannot be towed with wheels rolling on the pavement).
- Flatbed transport to the nearest DC Fast Charger or Supercharger is arranged by Apex dispatch. Flatbed transport fees apply unless covered under Gold Platinum.
